Patent claims:

- 1. A highly concentrated oil-in-water emulsion of organopolysiloxanes, which contains
- 5 (A) at least 45% by weight of organopolysiloxane which, in addition to the elements Si, O, C and H, also contains elements which are selected from N and S,
 - (B) emulsifier and

50 000 mPa·s.

- 10 (C) water, the highly concentrated emulsion having a pH of at least 7.5 and a viscosity at 25°C of not more than
- 15 2. The emulsion as claimed in claim 1, in which the organopolysiloxanes (A) are composed of units of the general formula I

$$R_a Y_b Si(OR^1)_c O_4 - (a+b+c)$$
 (I),

in which

20

30

- R is a hydrogen atom or a monovalent organic radical which contains elements which are selected from O, C and H,
- 25 R¹ is a hydrogen atom, an alkyl radical or an alkoxyalkyl radical,
 - y is a monovalent, SiC-bonded radical which contains elements which are selected from O, C and H and additionally contains elements which are selected from N and S,
 - a is 0, 1, 2 or 3,
 - b is 0, 1 or 2 and
 - c is 0, 1, 2 or 3,
- with the proviso that the sum of a, b and c in the units of the general formula (I) is less than or equal to 3 and at least one radical Y is contained per molecule.
 - 3. The emulsion as claimed in claim 2, in which the

radicals Y are those of the general formula II

$$R^{2}_{2}NR^{3}(-NR^{2}-R^{3})_{x}$$
 (II),

5 in which

30

35

- x is 0 or an integer from 1 to 10,
- R^2 is hydrogen, an alkyl radical, a cycloalkyl radical or a radical of the formulae -C(=0)-R or $-CH_2-CH_2-C(=0)-O-R$ and
- 10 R³ is a divalent hydrocarbon radical having 1 to 12 carbon atoms per radical and
 - R has the meaning mentioned above therefor.
- 4. The emulsion as claimed in any of claims 1 to 3, in which the emulsifiers (B) are nonionic emulsifiers.
- 5. The emulsion as claimed in any of claims 1 to 4, which contains emulsifier (B) in amounts of from 1 to 60% by weight, based on the total weight of organopolysiloxane (A).
- 6. The emulsion as claimed in any of claims 1 to 5, which has further organosilicon compounds as component (D).
 - 7. The emulsion as claimed in claim 6, in which the organosilicon compounds (D) are selected from silanes, silicone oils which contain no elements N and S and silicone resins.
 - 8. A process for the preparation of emulsions having a narrow particle size distribution, in which highly concentrated oil-in-water emulsions of organopolysiloxanes which contain
 - (A) at least 45% by weight of organopolysiloxane which, in addition to the elements Si, O, C and H, also contains elements which are selected from N and S,

5

- (B) emulsifier and
- (C) water,

the highly concentrated emulsions having a pH of at least 7.5 and a viscosity at 25°C of not more than 50 000 mPa·s,

are diluted without or only with slight shearing.
